declaration with data types dim string**

June 4th, 2020 - variables are used to hold value or an
expression whenever you have a piece of data to work
with you will have to declare a variable for example if
you have to store names of students or salaries of
employees you will be using variables named students or
salaries variables can also be used for holding
expressions'

'what is vbscript introduction amp examples

June 5th, 2020 - vbscript is a client side scripting
language like javascript vbscript stands for visual
basic script and it is a light version of microsoft
visual basic the syntax of vbscript is very similar to
that of visual basic'

'vbscript working with strings testplete documentation

June 4th, 2020 - the vbscript scripting language has no
data type that can be used to store single symbols
however this is not a problem since the string type can
hold both a series of characters and individual
characters moreover you can extract a single character
from a string using the `string.getchar` method and
vbscript's `mid` function the latter' 'working with dates
and times in visual basic techotopia

June 5th, 2020 - formatting dates and times the default
format of the date and time in visual basic is not

always acceptable for this reason visual basic provides the format function to allow the format of the date to be controlled the format function is actually a diverse function that can be used to format various types of data such as string monetary values and numbers'
