'multiprocessing process  
based parallelism python  
3 8 3

May 27th, 2020 -

introduction

multiprocessing is a  
package that supports  
spawning processes using  
an api similar to the  
threading module the  
multiprocessing package  
offers both local and  
remote concurrency  
effectively side stepping  
the global interpreter  
lock by using  
subprocesses instead of  
threads due to this the  
multiprocessing module  
allows the programmer to

---

---
