December 17th, 2019 - Distribution Automation System may refer to an arrangement of communication technologies, intelligent processors, and sensors that empowers to organize and screen the electric power distribution. Electric power distribution automation framework is an essential piece of smart grid frameworks." **Electric power distribution Wikipedia**

**December 28th, 2019 - Electric power distribution is the final stage in the delivery of electric power. It carries electricity from the transmission system to individual consumers. Distribution substations connect to the transmission system and lower the transmission voltage to medium voltage ranging between 2 kV and 35 kV with the use of transformers." Electric power distribution Simple English Wikipedia**

December 18th, 2019 - Electric power distribution is the delivery system of electricity to places that use it, such as homes and other buildings. It is done mainly by power lines, transformers, substations, and meters. The electricity comes from the power station at high voltage and is delivered at
